

The **Smartlog™** platform allows you to manage all your requirements yourself online, but we understand that some organisations would rather use a consultant.

Our consultants provide a number of different services, tailored to the specific needs of your organisation.

Fire Risk Assessments:

The consultant will complete a visual inspection at your premises, then detail the findings either on the **Smartlog™** risk assessment tool, or using a paper based method.

Audit Reports:

One of our qualified consultants will complete an audit report which provides you with an action plan on **Smartlog™** to manage your compliance requirements giving you a complete personal compliance system.

Smartlog™ customers are assigned a dedicated account manager to help them with any compliance issues that might arise and to assist with the set up and management of the platform.

And as an added benefit, all **Smartlog™** customers receive discounted pricing on servicing of their fire equipment.

Training

Basic Fire Awareness Training:

Smartlog™ has a basic fire awareness training facility that provides you with a cost effective, efficient way of ensuring all of your staff are trained as required by legislation. The awareness test is an online training course which takes around 15 minutes to complete. The training is comprehensive and fully recorded so you have evidence of all your staff completing the course.

Fire Warden Training:

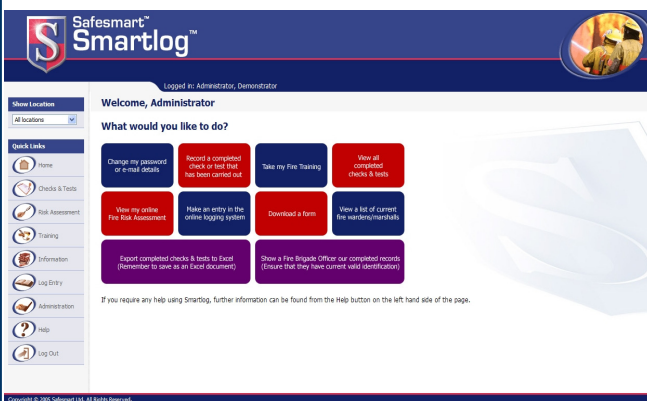

The Fire Warden training package provides a more detailed look at personal fire safety and is included in the **Smartlog™** system as an online training course which takes around 30 minutes to complete. It will cover fire equipment, signage, escape methods, and other information that a Fire Warden will require.

Display Screen Equipment Training:

The **Smartlog™** platform also provides display screen equipment training and assessment for any staff who regularly use audio-visual equipment (e.g. computer screens) as part of their job.

Full Management System

The **Smartlog™** system gives you simple way of managing of your organisation's legislative requirements, and highlights any areas which need attention by sending emails to the relevant people.

As you complete your compliance requirements through **Smartlog™**, records are automatically kept, recording time, date and name of who completed the action. Full overviews of information regarding your organisations compliance management are simple to access and will provide full transparency of your compliance requirements.

Documents can also be scanned into **Smartlog™** meaning no more filing, as they can be stored online.

Risk Assessment Platform

The Risk Assessment facility allows you to take control of your fire risk assessments. This can be completed by our consultant or to reduce the cost further, you are able to complete this yourself on the **Smartlog™** platform.

A help and notification system is built in to the risk assessment tool, providing you with information regarding the questions required by the risk assessment tool, and notifying you when anything needs reviewing.

Automatic Reminders:

To minimise the time spent ensuring your organisation is compliant, **Smartlog™** has a built in reminder system that will send notification emails to the relevant people, when a compliance issue arises.

Fire safety risk alerts, health & safety risk alerts, compliance requirement alerts, daily functional checks and test alerts and training alerts are all emailed to you to keep you aware of your compliance responsibilities.

This enables proactive action to be taken and also brings to your attention any compliance requirement not being fulfilled
